

1.大 O 表示法练习

请用大 O 表示法表示算法的时间复杂度:

算法 1 :

```
void Algorithm01() {  
  
    int sum = 0, n = 100;  
    sum = (1 + n)*n / 2;  
    printf("%d\n", sum);  
}
```

算法 2 :

```
void Algorithm02() {  
  
    int sum = 0, n = 100;  
    sum = (1 + n)*n / 2;  
    sum = (1 + n)*n / 2;  
    sum = (1 + n)*n / 2;  
    sum = (1 + n)*n / 2;  
    sum = (1 + n)*n / 2;  
    sum = (1 + n)*n / 2;  
    sum = (1 + n)*n / 2;  
    sum = (1 + n)*n / 2;  
    sum = (1 + n)*n / 2;  
    sum = (1 + n)*n / 2;  
    printf("%d\n", sum);  
}
```

算法 3 :

```
void Algorithm03(int n) {  
  
    int i;  
    for (i = 0; i < n; i++) {  
        printf("%d\n", i);  
    }  
}
```

算法 4 :

```
void Algorithm04(int n){

    int count = 1;
    while (count < n ){
        count = count * 2;
    }
}
```

算法 5 :

```
void Algorithm05(int n){

    int i, j;
    for (i = 0; i < n;i++){
        for (j = 0; j < n;j++){
            printf("%d\n",i+j);
        }
    }
}
```

算法 6 :

```
void Algorithm06(int n){

    int i, j;
    for (i = 0; i < n; i++){
        for (j = i; j < n; j++){
            printf("%d\n", i + j);
        }
    }
}
```

算法 7 :

```
void function07(){
    printf("hello world!\n");
}

void Algorithm07(int n){

    int i, j;
    for (i = 0; i < n; i++){
```

```
        function07();  
    }  
}
```

算法 8 :

```
void function08(int n) {  
    int i;  
    for (i = 0; i < n; i++) {  
        printf("hello world!");  
    }  
}  
  
void Algorithm08(int n) {  
  
    n++;  
    function08(n);  
    int i, j;  
    for (i = 0; i < n; i++) {  
        function08(n);  
    }  
    for (i = 0; i < n; i++) {  
        for (j = i; j < n; j++) {  
            printf("hello world!\n");  
        }  
    }  
}
```
